Thinking in continua: beyond the "adaptive radiation" metaphor

Mark E. Olson, Alfonso Arroyo-Santos

Supplementary Figure 1. The 78 “adaptive radiations” reflected in this tree come from the recent phylogenetic literature, and show that “adaptive radiation” is a metaphor that has given a powerful heuristic to biologists working on all groups of organisms at all levels of the phylogenetic hierarchy. More importantly, it unites the nearly 300 authors of these studies with a common theme.
